Living Things Rap

(Science Grade 4 Unit 3)

Organisms are put into groups;
The first one is BACTERIA.
Bacteria is one little cell—
It can make you sick so you don't feel well.

The PROTIST group follows next;
Its special thing is the nucleus.
Sometimes it's one cell, sometimes more,
But it always has a nucleus core.

The FUNGI group gets energy
From living things that are sometimes dead.
It might be mold or growing mildew;
Mushrooms and yeast are examples too.

Now we get to things we all know.
The PLANTS group has some chlorophyll.
They need the sun for energy.
They're a group that's easy to see.

The last group we know really well.
The ANIMAL group is easy to tell.
Some eat plants, some eat meat,
Some eat both and call it a treat!
